EDIBLE, MONEY - MAKING

BLUEBERRIES

WILL YIELD FRUIT EFFICIENTLY
FOR MORE THAN FIFTY YEARS

OUR PLANTS ARE THE FINEST GROWN IN AMERICA. OF STOCKY AND GENEROUS SIZE, WHICH WILL YIELD
BLUEBERRIES AS BIG AS GRAPES

We offer 3 year bearing age clumped plants, 12 to 18 inches tall, with fruit buds ready to bear next fruiting season.

Extend your fruiting season over a period of two months by planting the following varieties:

CABOT. (Early). Bush is rather low and spreading, seldom reaching a height exceeding 4 feet. One of the earliest varieties, a good producer, excellent flavor, and a good shipper.

RANCOCAS. (Midseason). Ripens about two weeks after Cabot. The bush is tall, vigorous and productive. The fruit is large, light blue, firm.

JERSEY. Bush above average in vigor, erect, productive; berry large, round oblate, of good blue color, and firm. Late-ripening berry.

\$1.85 each POSTPAID

3 to 9 plants \$1.65 each

10 to 20 plants \$1.40 each

20 to 50 plants \$1.20 each

VARIETIES LISTED CAN BE PLANTED IN ANY LOCALITY WHERE
BLUEBERRIES HAVE A RIPENING SEASON.

Mr. A. Kehrer, Hudson, New York, received an order of six of our blueberry plants last spring, same plants we are offering now. After receiving them he immediately wrote:

Gentlemen:

Please duplicate order received today as they were much better than I expected, and I was very much pleased.

Signed,

ALSO COMBINE WELL WITH SHRUBS

Because of their ornamental qualities blueberries may be planted with: Rhododendron, Laurel, Azalea, Juniper, Viburnums, Hawthorn, or in foundation plantings.

Two different varieties needed for proper pollination

Planting directions accompany each order of Blueberry Plants

If ordering blueberries only, transportation charges will be paid by us

BEARING-AGE APPLE

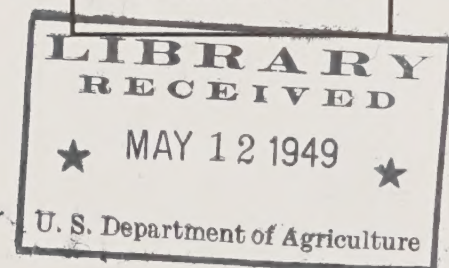

We have a limited quantity of these extra old and large trees for fall and spring sales. Therefore, will fill orders until sold out—limiting three trees to a customer. Trees are 6 to 7 years old grading 1½" caliper and up.

FOLLOW THE EXPERT ORCHARD MEN BY PL

OUR TREES ARE HARDY NEW YORK STATE GROWN. TREES THAT WILL GIVE SUCCESSFUL FUTURE RESULTS
A GOOD STURDY BODY AND EXCELLENT FIBROUS ROOT SYSTEM. PREFERRED BY EXPERT ORC

APPLES

\$1.95 each — \$17.50 per ten

We offer three to four year old "BIG BUSTER" trees—quicker bearing, grading 6 to 7 feet tall—splendid for filling in or starting young orchards.

McINTOSH. A very popular leading variety, bearing young and annually. A good market apple because of its eating qualities. Fruits medium to large, almost covered with brilliant crimson, flesh snow white, crisp, tender, sub acid.

DELICIOUS. Its exquisite flavor is known to every consumer. Fruits medium to large having brilliant dark red skin. Flesh crisp and juicy. Tree is hardy and productive and bears annually. Excellent commercial variety. Will stand packing and shipping well. Good pollinator.

NORTHERN SPY. Outstanding for its storage possibilities; will keep until June. Excellent eating apple and long a favorite for this. Ripens November. Fruits medium to large, bright red, spread with delicate bloom, flesh exceptionally crisp, tender and delicious.

RHODE ISLAND GREENING. A good "pie" apple and excellent for apple sauce. Fruits large, greenish-yellow, medium to large. Flesh juicy, firm, good quality. Splendid for shipping and storage. Trees are very hardy and productive and bear young. Ripens December.

DWARF FRUIT TREES—Write for prices, varieties, and sizes.

2 YEAR TREES IN VARIETIES LISTED 3 TO 4 FEET TALL

1 to 9 \$1.20 each

10 to 49 \$1.00 each

50 and over 75c each

PLUM AND PRUNE

\$2.25 each — \$20.00 per ten

We offer three to four year old "BIG BUSTER" trees—quicker bearing, grading 6 to 7 feet tall—splendid for filling in or starting young orchards.

(Young trees come into bearing between two and four years)

Special Note: Our plum trees are budded on myroblan root stock; hence can be planted more successfully on a wider range of soils, which in turn gives a lasting satisfaction to the buyer.

STANLEY PRUNE (New Variety). Ripening in the middle of September, producing a vigorous and full crop—freestone. Fruit is large dark blue, of excellent flavor; flesh is greenish-yellow. Good commercial variety. Young trees will bear fruit when three years old.

BRADSHAW PLUM. Ripening the first part of September—early. Fruit is large dark violet-red, juicy and delicious. Excellent canner and good shipper. The flesh is yellowish-green. The tree is vigorous and productive.

FELLEMBURG OR ITALIAN PRUNE. The most outstanding commercial prune. Thrives under most all climate and soil conditions. Excellent for market and canning. Fruit is long, oval, purple with a dark blue bloom; flesh firm and delicious. Freestone. IT IS FAST REPLACING THE GERMAN PRUNE IN COMMERCIAL ORCHARDS. Ripening the last of September.

2 YEAR TREES IN VARIETIES LISTED—3 TO 4 FEET TALL—1 to 9 \$1.50 each, 10 to 49 \$1.20 each, 50 and over 90c each

PEACHES—Heavy Yielders **\$1.25 each — \$10.00 per ten trees**

The first to yield delicious, juicy, tree-ripened fruit of the season. Enjoyed by everyone, and if canned, can be eaten all winter.

Our trees are one year stocky, extra-selected, 4 to 5 feet tall—"Growers' Best."

For larger peach trees, write for quotations

HALE HAVEN. A large new yellow freestone. Developed at Michigan Experiment Station, by crossing the two popular varieties—J. H. Hale and South Haven. Its high color even before complete ripening, gives it great market value because of the advantage of premature picking, packing, and shipping. Ripens September 1st.

PEAR

\$2.25 each — \$20.00 per ten

We offer three to four year old "BIG BUSTER" trees—quicker bearing, grading 6 to 7 feet tall—splendid for filling in or starting young orchards.

(Young trees come into bearing between three or four years)

BARTLETT. When pears are mentioned, this variety stands foremost, not only as a good eater, but unchallenged when used commercially. The fruit is large golden yellow when ripe; flesh being buttery, very juicy, richly flavored. The tree is very productive, and yields full crops every year. From September to October.

SECKEL. An excellent eating and pickling pear. Small, yellowish-brown; deliciously flavored. The tree is very productive and bears the latter part of September. The fruit is blight resistant.

DUCHESS D'ANGOULEME. Self-fruitful and a good pollinator. Ripens the last of September, being a heavy bearer. The fruit is large, greenish-yellow, splashed with russett. A good market sort.

GOLDEN JUBILEE. Comparatively new peach, having been offered by the New Jersey Experimental Station in 1928. However it has been widely planted since because of its popularity. Exceptionally hardy; severe winters do not seem to effect it from yielding heavy crops. The fruit is yellow with red blush skin; flesh, golden yellow, juicy, sweet and delicious. Freestone.

ELBERTA. The old fashioned favorite. America's leading commercial peach. It succeeds on a wider range of soil and climate where peaches can be grown than any other variety. Trees being more hardier in bud than many varieties, hence more uniform bearers. Fruit is large, yellow with red cheek; flesh is tender and juicy, with a light bitter flavor which is preferred by many. Ripening middle of September.

PLANTING MAYO'S DEPENDABLE FRUIT TREES

ITS BECAUSE THEY ARE GROWN AND HANDLED BY THE "KNOW-HOW" EXPERTS. EVERY TREE HAVING ORCHARD MEN BECAUSE OF THEIR HEAVY AND PROFITABLE YIELDS OF FRUIT AT MATURITY.

CHERRIES

\$2.²⁵ each — \$20.⁰⁰ per ten

We offer three to four year old "BIG BUSTER" trees—quicker bearing, grading 6 to 7 feet tall—splendid for filling in or starting young orchards

(Young trees come into bearing between three and four years)

BLACK TARTARIAN. Long a favorite for eating. Fruit is large purplish-black; tender and juicy. Ripening around the first of July. Tree is exceptionally vigorous and yields an immense crop.

NAPOLEON (Royal Ann). Better known as Oxheart. Beats all for delicious sweet cherry pies. The fruit is pale yellow with bright red cheeks; firm. Good cherry for market, because it keeps so well. Trees are productive and come into bearing early. Fruit ripens a week later than Black Tartarian.

BLACK

TARTARIAN

SOUR CHERRY

MONTMORENCY. The fruit growers' biggest money-maker. Thousands of tons of these cherries are picked annually and sent to canning factories to be canned for market purposes. Trees are very productive, requiring very little space and self-fruitful bearing very young.

1 to 9 \$1.50 each 10 to 49 \$1.25 each
50 and over \$1.00 each

SOUR

(Same Prices as Above)

POLLINATION OF FRUIT TREES (Possible to bear fruit)

Cross-pollination is needed for most varieties of Apple; therefore plant at least two different varieties. Cortland, Delicious and Wealthy have been highly recommended by the New York State Agricultural Experiment Station, Geneva, N. Y., as being very good pollinators. Therefore, include one of these varieties in your planting.

Varieties not requiring cross-pollination are: Baldwin, Jonathan, Red Rome Beauty, R. I. Greening, and Wealthy. However these varieties are benefited by a pollinator.

Pears like apples need cross-pollination; however Bartlett and Seckel do not pollinate each other, and therefore when these two varieties are desired, plant a third variety—for example Duchess D'Angouleme, for the pollinator.

Plums—Varieties which we offer are self-fertile and produce fruit on their own pollen; however they produce better when interplanted with other varieties. For example—If the variety Stanley is wanted most, plant another variety such as Bradshaw with it.

Cherries—The varieties we offer need cross-pollination; therefore plant at least two different varieties. Sour cherries are self-fruitful and do not require a pollinator.

Peaches—Self-fruitful. No pollinator is required.

IMPROVED AND DEVELOPED BY "KNOW-HOW" EXPERTS

Before any root stocks are set out, which is the first step in producing fruit trees, the land is properly fitted. It has two or three green humus crops plowed under, and several loads of natural (barnyard manure) fertilizer. This insures our trees of having good fibrous root systems. A limited amount of commercial fertilizer is used, but not to a great extent for our "Know How" Experts prefer the organic way of growing fruit trees. This way does not grow them as fast, hence ready for sale sooner, but provides them with a stronger and more solid body, which is the most important factor in the success and growth of your tree after you receive and plant it.

At budding time, depending on what sort of fruit is being propagated, bud sticks are gotten. They are taken from the most healthy and thrifty pedigreed trees. (This is the same practice as raising pedigreed livestock.) Methods of budding are modern. Trees are kept clean during the growing season by cultivation, and spraying is done most faithfully, when it is needed.

Because it is impossible to determine any root ailment when the trees are growing in the nursery rows, it has to be done after they have been dug, at which time our State Nursery Inspector is on hand to determine whether a tree is fit or unfit for transplanting. This inspection insures you of getting **healthy trees from top to bottom.**

TRUENESS-TO-NAME—Dr. Shaw and Associates examine and identify our fruit trees for trueness-to-name. This is done the following season after budding, and while they are growing in the nursery row.

THRIFTY GROWERS PLANT OUR GRAPES FOR SENSATIONAL YIELDS

**QUICK TO BEAR — EASY TO GROW
ADAPTABLE TO ANY SOIL OR SITE**

Hundreds of tons of grapes go to canneries and distilleries annually; hence, one of the most PROFITABLE enterprises you can invest in—the growing of grapes.

THE BIG THREE

CONCORD—Black

Bunches large and compact; berries large, round, almost black, covered with bloom; pulp juicy and sweet; vine very hardy and equally productive. A great favorite in the markets, although too tender for shipping long distances. Ripens last of September.

CACO—Red

A new red variety of extremely rich flavor. It is a cross between the Catawba and Concord, with all the good qualities of both. Ripens about the first of October.

NIAGARA—White

Bunches very large, uniform, and compact; berries large, pale yellow, with a thin white bloom; pulp, melting. An excellent variety for either home or market-garden. Ripens a little before Concord.

ASTRID. A New Exhibition-Type Mum of unusual beauty. Single shell-pink petals combining with a BRIGHT YELLOW CENTER, set off by a background of glossy dark green foliage. Height 18".

Price 75c each

ROSES—Write us for your wants. We undoubtedly have the variety you're looking for. Our plants are two year, blooming size, hardy northern grown, and you will find them of superior quality. "Growers' Best."

PRICES: Hybrid Teas (Regular) \$1.00 each; Patented \$1.50 and up

PERENNIALS—We offer a generous assortment of new and old sorts and varieties. Ours are strong field-grown plants of generous size, and of blooming age.

PRICES: 45c each on most sorts

SHOWY, BEAUTIFUL PEONIES

MASSIVE ★ FRAGRANT ★ GRAND

No other hardy flowering plant endures the severe Northern Winters better than the Peony. Can be used in almost any position in any garden. Plants are equally at home planted as single specimens on the lawn, in tall grass, or planted in beds and borders with other perennials and bulbous plants, or when massed by themselves.

INVALUABLE AS CUT FLOWERS—Long stiff stems and beautiful large flowers of rich coloring.

(If cut just as the bud is about to open and put in a vase, bowl, or basket and placed in a cool room, the blooms will last many days.)

Our plants are strong division, with three to five eyes (buds). Guaranteed to bloom next blooming season.

We take the risk out of your receiving plants that do not bloom, by guaranteeing them to produce blooms or replacing them with plants that will.

The varieties which we offer are the new, lovely and more delicately tinted varieties recently introduced. Because of our limited quantity of each variety, we are only able to offer our Peonies in COLORS relative to these varieties as follows: Flesh or deep pink, yellow, white, deep purple, light or dark red.

FESTIVA MAXIMA

PRICES OF ALL PEONIES

75c Each

\$7.00 per ten — **\$60.00** per 100

(When ordering peonies alone, add 5 per cent for postage)

EASY TO PLANT

For development plant each plant spacing three feet in diameter. Well-drained soil. The roots should be set in the soil so that the top eye is not more than 2 or 3 inches from the surface. Well-rotted animal manure used so it does not come in immediate contact with the plant is an excellent fertilizer.

Friendly Face — PLANT THEM

OPEN THE DARWIN TULIP SEASON WITH *Annie Laurie*

An outshiner lasting ten days longer than the bulk and opening the Darwin Tulip season with its earliness of bloom. Every showgarden should have this one to extend the presentation by seven to ten days.

Twenty-two inches of stem. A delicately soft "baby pink" bloom, with bright yellow stamens—what an exhibition!

We offer Dutch-grown "topsize" bulbs—no finer can be grown or purchased. "THE WORLD'S BEST."

DELIGHTFUL FLOWERING SHRUBS FOR THE HOME GROUNDS

ALTHEA

Our shrubs are well established, two and three years old—blooming age and of a size to give an immediate effect.

WEIGELA Rosea. One of the choicest of all shrubs, growing to a height of 4 to 6 feet. Having remarkably showy flowers of brilliant pink and trumpet shaped. Blossoming in June and July and at intervals through the summer. Does best if not pruned. We offer this shrub with a variegated leaf also. **Large Size—3 to 4 feet—\$1.25 each. \$10.00 per ten shrubs.**

ROSE TREE OF CHINA. Small tree-like shrub, miniature, rose-like blooms before the leaves in early spring. Ultimate height 4 feet. **Large Size—3 to 4 feet—\$1.65 each.**

FLOWERING QUINCE. A mass of rich scarlet flowers in early spring before the foliage appears. Small, golden spicily fragrant quince-like fruit in the fall. An old-fashioned shrub of proven garden merit. Ultimate height 5 feet. **Top Size—2 to 3 feet—\$1.00 each, \$9.00 per ten.**

WEIGELA

PLANT GIANT HARDY PHLOX

FOR THE

MAYO'S BEVERLY NURSERIES "Continuous Depend

ALTHEA (Rose of Sharon). The Altheas are free growers and not particular as to soil. Large bell-shaped flowers of striking color in August and September, when but few other sorts are in blossom. They attain a height of from 6 to 10 feet. We offer them in the following colors:

Double Purple — Double Red — Double White

Size 3 to 4 feet shrubs
(large size)

PRICE \$1.25 each — \$10.00 per ten shrubs

FOR OTHER SORTS AND VARIETIES OF SHRUBS—Inquiries Invited

BIG-LEAF WINTERCREEPER

EVERGREEN BITTERSWEET (Climbing Euonymus Vegetus). Beautiful 365 days of the year. Particularly adapted to cover garden walls, old stumps or embankments with any exposure, but the fruiting is best when the plants receive the warm sun; the plants are strong, robust climbers and in fall and winter bear a profusion of bright red berries. The vine is covered the whole year with green foliage, and absolutely holds the color even in hottest summer or coldest winter.

Good Strong Plants, \$1.00 each, \$10.00 per doz.

ROSE TREE OF CHINA

CUT-LEAF WEEPING BIRCH

A fountain of deeply cut leaves and weeping branches. Truly an ornamental specimen.

We offer six to eight foot trees—the largest size we advise transplanting without a ball of earth covering the roots for successful results. Every tree is first-class in every particular.

PRICE: \$5.00 each, \$40.00 per ten trees

BECHTEL'S DOUBLE FLOWERING CRAB

Double Pink Flowers in the spring—Tra la . . .

This very extra choice crab thrives over a wide range of soils. Very hardy and flowers every year. Growing to a height not exceeding 18 feet. Excellent for lawn specimens.

We offer 6 to 8 foot trees with flower buds ready to bloom next blooming season.

PRICE: \$5.00 each and Worth it

NO PRODUCTION LINES AT MAYO'S

Each Order Has Our Personal and Careful Attention

DELIVERY

All orders are shipped f.o.b., Pittsford, New York, unless otherwise listed. (Postpaid means we pay delivery charges). Orders are well-packed to insure the trees and plants of having a "field-fresh" condition upon arrival to the customer. C.O.D. orders accepted provided a quarter of the amount is sent with the order.

GUARANTEE

All material which we offer is guaranteed to be first-class, graded to or better than the standards adopted by the American Association of Nurserymen. If planted and cared for properly, it should thrive and grow. However, Nursery Stock is of a perishable nature and a limited amount of failures is to be expected. These failures might be due to weather or other conditions over which we have no control. Therefore, should failure occur; in fairness to our customers, we agree to replace, once, at ½ the purchased price, if notified, before July 15th, the following date of purchase.

REFERENCES

American Association of Nurserymen, New York State Nurserymen's Association, Security Trust Company—Pittsford and Rochester Offices.

FALL IS IDEAL PLANTING TIME

FACTORS PROVING THIS: Trees and plants are in the ground when spring comes thus ready to grow whether the season is early or late. No storage dryness—dug fresh in the fall. The winter months before the coming growing season permits roots of trees and plants to callous over, thereby producing small fibrous roots from the callous, which are able to absorb moisture and nutrients from the soil when growing season starts.

Complete Your Home Garden By Planting RED RASPBERRIES

Red raspberry plants may be set with safety in the fall any time before the soil freezes.

LATHAM. AMERICA'S MOST POPULAR AND LEADING RED RASPBERRY. Both commercially and for the home garden. Free from disease and insects and being a heavy yielder. Excellent with sugar and cream or eaten alone; also cans well. We offer large "Certified" transplants, which will yield berries next ripening season.

SPECIAL PRICE

\$2.75 per doz. plants, \$9.00 per 50 plants, Prepaid

INDIAN SUMMER. NEW SENSATIONAL EVERBEARING RED RASPBERRY YIELDING TWO FULL CROPS EACH SEASON. June into July. Mid-September till frost.

A large, disease-resistant red raspberry, being very hardy and productive.

A grower reports a yield of 5 tons of these delicious red raspberries to an acre, which equals 660 crates, 24 pints to a crate. Figure this up in dollars and cents. This would be an excellent source of income for the home-owner with an extra acre of land. We offer large "certified" transplants for the grower who is interested in harvesting a crop of raspberries next ripening season.

SPECIAL PRICE

\$3.00 per doz. plants, \$10.00 per 50 plants, Postpaid

EASY TO PLANT. Any ground where other plants do well is satisfactory. Insert a space to its full depth and push forward. Insert the plant so that all the roots are under the surface of the ground, plus an inch of top part, and then with the foot stamp the soil solidly against the plant. If the soil is dry, water before the soil is firmed. Mulch with straw or leaves for winter protection.

LATHAM

Mary Washington Long-Life ASPARAGUS

A well-tended bed in the Home Garden will yield shoots many seasons.

THE FIRST FULL CROP REFUNDS YOUR MONEY. AFTER THAT EACH SPRING YOU GET FOUR TO SIX WEEKS OF WHOLESOME, DELICIOUS EATING AT A TIME OF YEAR WHEN OTHER VEGETABLES ARE GIVING NOTHING BUT PROMISES. MAKE IT A "sure" FOR YOUR GARDEN—Order you plants, NOW—TODAY.

ADAPTABILITY: It will grow on slopes. Splendid for preventing soil washing. Background for a flowerbed. Requires little care.

OURS ARE STRONG, ONE YEAR PLANTS
(Can be cut the next year after planted)

3½¢ each POSTPAID

EASY TO PLANT: Select any good ground that has full sun and is not wet. Spade plenty of manure into it; asparagus requires lime. To set a plant, open a crack in the ground with a spade, slip the root into it until the bud is about half an inch below the surface, and stamp the crack shut. Or scoop out a three-inch trench and set them in that. Set the plants a foot apart and two feet between the rows. In any case don't have more than an inch of earth over the crowns, as they are liable to be smothered-out if covered too deeply. Mulch for winter with straw or leaves.

MARY WASHINGTON ASPARAGUS is the first result of a blister proof campaign for the eradication of asparagus rust and is as far as possible an extremely resistant, vigorous, and high yielding strain of giant asparagus. The plants represented in Pedigree of the last three generations are the best found in a ten-year research among millions of plants tested.

By best, we mean the ones that have produced offspring uniform, rust resistant, high yielding, large size, unbranched shoots, with good top buds of rapid growth which indicates tenderness.

In ordering, estimate how many plants you will need on the basis of 25 per person; double that amount if you want to cut freely when the plants are young.
